

Alphabetical list of Constraint Grammar tags

The tag list given here is an unabridged alphabetical tag inventory for VISL's CG languages, comprising both lexical tags and CG-added tags. Many of the tags are for internal CG purposes only, and not meant to be shown in actual corpus annotations. For more information and examples, see http://visl.sdu.dk/lecture_notes.html and the info sections of individual languages at visl.sdu.dk/.

Primary tags:

All-upper case blue: [POS categories](#)
All-upper case black: Inflection tags
@-tags green: [Syntactic function tags](#)
§-tags brown: [Semantic roles](#)

Secondary tags:

<...> blue: [Semantic prototype tags for nouns](#)
<...> green: [Semantic prototype tags and domain tags for adjectives](#)
<...> purple: [Semantic prototype tags for proper nouns](#)
<...> red: [Framenet categories for verbs](#)
<...> black: other secondary tags, e.g. valency, POS subclass, syntactic subclass

In the list, upper case tags precede lower case tags, and angular bracket tags (<>) are listed after letter-only tags, followed by @-tags (function tags) and §-tags (semantic roles).

* = experimental or rare category

*[0-9]+ = number of (Danish) lemmas tagged with a given category (for adjective twin tags)

¹ = specific to Greenlandic-Danish MT (kal2dan and dan2kal)
